Pablo Pavón

Data & Business Analyst | SQL, Python, Power BI, Tableau | Pricing, Customer Analytics, Requirements

Berlin, Germany (CET) | English (C1), Spanish (native), German (B2)

SUMMARY

Data and business analyst with 10+ years of experience across banking, automotive e-commerce, marketing analytics and insurance. I turn business questions into clear, decision-ready answers: SQL and Python analysis, Power BI and Tableau dashboards, pricing and customer analytics, and the requirements and specifications that get data projects built right. I work AI-assisted (Claude, Claude Code) to deliver Python and SQL work faster. Every deliverable goes through an explicit QA process (reconciled totals, tests and an independent second review); I validate the business logic and numbers and take responsibility for the result. Comfortable working with non-technical stakeholders in English, Spanish and German.

SERVICES

- **Data analysis & reporting:** SQL queries, data cleaning and transformation in Python (Pandas), ad-hoc analysis, KPI definition.
- **Dashboards & BI:** Power BI and Tableau dashboards; automated recurring reports.
- **Excel & Microsoft 365 (SharePoint):** Excel models with formulas and reconciliation checks (registers, cash flow, pricing, reporting); SharePoint sites, document libraries, lists, naming and folder structure, and access permissions for small teams (configuration, not custom development).
- **Pricing & commercial analytics:** price benchmarking, cross-market price comparison, sourcing and assortment analysis.
- **Customer analytics:** cohort and retention analysis, RFM segmentation, churn analysis, customer lifetime value (LTV).
- **Applied predictive modeling:** scoring and classification models in Python (scikit-learn) for churn and attrition-type questions.
- **Business analysis:** requirements gathering, user stories and acceptance criteria, functional specifications, process mapping, data mapping for system migrations.
- **GDPR data management (operational, not legal advice):** data retention and deletion concepts, data inventories, consent data migration.
- **Python automation for analytics:** scripts that pull data from APIs, clean and merge files, load SQLite databases and generate reports.
- **AI workflows for teams:** AI-assisted reporting and monitoring workflows, AI writing standards and prompt kits, decision logs and documentation for AI-assisted projects.
- **Financial analysis:** investment and portfolio analysis, market and macroeconomic research.

SKILLS

SQL, Python (Pandas, NumPy, scikit-learn), Power BI, Tableau, Excel (advanced modelling), Microsoft 365 / SharePoint (sites, libraries, lists, permissions), Jira, SQLite, REST APIs, Linux server operations, AI-assisted development (Claude Code), requirements engineering, user stories and acceptance criteria, functional specifications, process mapping, data mapping, data migration, GDPR, OneTrust, cohort analysis, RFM segmentation, LTV, churn analysis, pricing analytics, predictive modeling, stakeholder management.

EXPERIENCE

Senior Business Analyst, IT & Processes

Insurance company, Berlin, Germany | Nov 2023 - Present

- Coordinate the business analysis workstream of a legacy mainframe decommissioning program, mapping and routing data to three target platforms: an archive repository (integrated with Guidewire for claims access), a modern policy management platform, and OneTrust for marketing consent data, with downstream Salesforce Marketing Cloud integration.
- Authored functional specifications for a read-only contract viewer: 9-tab UI structure, backend-table-to-UI data mapping, search validation rules, and role-based access aligned to Active Directory groups.
- Co-authored the company's integrated data deletion and blocking concept (GDPR Art. 17/18, German statutory retention periods) across primary and secondary systems: data warehouse, SAP FI, document repositories and

backups.
- Team member on the design and delivery of the customer Self-Service Portal (personal data, contract, coverage, banking, document upload, termination).
- Authored a proposal for multilingual customer service combining AI translation with certified-translator validation and a phased pilot rollout.

Senior Strategy + Data Analyst
Foundry, Berlin | Oct 2021 - Nov 2023
- Designed and prototyped a machine-learning model for employee attrition risk scoring; the methodology was adopted as the foundation for the company's internal retention scoring system.
- Built behavioral segmentation and churn analysis models in Python to inform marketing campaigns and customer lifecycle decisions.
- Established automated BI reporting giving executives visibility into marketing performance and resource allocation.

Pricing Intelligence Analyst
Auto1 Group, Berlin | Oct 2020 - Nov 2021
- Analyzed pricing across Auto1's 9-country European used-car marketplace to inform sourcing decisions: which models to buy, in which markets, at which time of year, and where to sell them.
- Built real-time pricing and inventory dashboards in Tableau for regional managers across European markets.
- Standardized data pipelines and reporting templates supporting commercial operations.

Investment Analyst (High Net Worth)
Santander Argentina, Buenos Aires | Dec 2011 - Sep 2020
- Advised high-net-worth clients on portfolio allocation, with financial analysis aligned to macroeconomic conditions and client objectives, across multiple cycles of market volatility.

INDEPENDENT PROJECTS

Algorithmic trading research system (independent, paper trading, not a commercial product)
- Python (Pandas, NumPy, async), SQLite with idempotent migrations, exchange APIs via ccxt, Linux server operations; around 700 automated tests. Methodology grounded in trading literature (Elder, Harris, Chan, López de Prado), documented with decision records and strategy memos. Validation discipline: pre-registered hypotheses, untouched hold-out data, leakage tests, multiple-testing control and power analysis.

E-commerce customer analytics case study
- End-to-end analysis: data integration, cohort analysis, RFM segmentation, LTV calculation and a 12-initiative conversion-rate optimization plan. Python with SQL backend.

EDUCATION & CERTIFICATIONS
- MBA (candidate), CEUPE (Spain / Mexico), expected 2026
- B.A. Business Administration, USI Buenos Aires, 2011
- Data Science for Business (DS4B), applied machine learning
- Google Professional Certificates: Project Management (2024), Data Analytics (2023)
